Abstract

Interaction of pentaphenylantimony with *bis*(*O,O*-dialkyldithiophosphate) triphenylantimony in toluene were obtained with a yield of 90% *O,O*-dialkyldithiophosphate tetraphenylantimony. *Bis*(*O,O*-dialkyldithiophosphate) triphenylantimony was synthesized with the yields of up to 80% of the dibromide triphenylantimony and *O,O*-dialkyldithiophosphate potassium in toluene.
