Key words: *tropilium perchlorate, N-arylmethylaniline, N-arylmethyl-4-(1-cyclohepta-2,4,6-trienyl)aniline.*

Abstract

The interaction between *N*-arylmethylanilines and tropilium perchlorate resulted in the production of *N*-arylmethyl-4-(1-cyclohepta-2,4,6-trienyl)anilines which have anti-fungal properties against *Candida albicans*.
