Keywords: aluminum oxide, zirconium oxide, nano-powders, nano spray drying.

## **Abstract**

In this paper it was shown that the use of nano spray dryer (Nano Spray Dryer B-90) to produce powders Al<sub>2</sub>O<sub>3</sub> and ZrO<sub>2</sub>. It has been established that that spray drying produces granules of aluminum oxide and zirconium in size from 0.5 to 5 mkm, consisting of nanoparticles of 100 nm or less.
