Abstract

The number of compounds of 5-aryl-4-benzoyl-3-hydroxy-1-[2-(2-hydroxyethoxy) ethyl] -3-pyrroline-2-ones was obtained by using preparative techniques. The structures of the compounds has been demonstrated by using IR and ¹H NMR spectroscopy.

The antihypoxic activity of the synthesized compounds has been studied by methods normobaric and hemic hypoxia. The relationship between the structure of compounds and their antihypoxic activity have been detected.
